

Process Guidelines for **Analogic Thinking**

Process Guidelines

- * Identify the relationship between the two items/ideas from a specific domain.
- * Describe that relationship in general terms. Elaborate and refine as needed to establish, in general language, the type of relationship between the items.
- * Map that relationship onto a different domain to determine if there is a similar relationship.
- * Describe that relationship in general terms. Elaborate and refine as needed to establish, in general language, the type of relationship between the items.

Reflect on your work and articulate what you learned, e.g.,

- what you notice that hadn't occurred to you before
- what surprises and troubles you
- what is confusing and clear
